A person with spiky hair is standing in a dark environment, holding a laptop. The person is wearing a dark t-shirt and a watch on their left wrist. The laptop is open and held in front of them. The background is completely black, making the person and the laptop stand out.

**UPDATE  
ON  
PROGRESS**

**OPEN MUSIC SUMMER LAB 2016**

NAME: Idan  
ORGANIZATION: Optico

The Berklee ICE/IDEO Open Music Initiative Summer Lab addresses the challenge of getting quality data about music into a shared ledger. If we do, we can create more accurate and complete information even from the most robust technical solution will fail. Our goal is to explore new work flows and instruments to capture this information.

**THE WORKSHOP**

1. What new technology is being created to capture this information?

**CASE ANSWERS**

**OPEN MUSIC**  
MICHAEL HENDRIX  
IDEO

Credibility  
we are  
of music platforms  
Tube, SoundCloud, Google/Spotify  
with this - and I  
at consumers are utilizing  
concert/event expe-

I agree  
but we  
with the  
inception

**JUNE 2017**

The background of the slide is a dark purple color with a faint, repeating pattern of stylized leaves and branches. In the center, there is a circular emblem featuring a gear-like border and a central design that is partially obscured by the text. The text is arranged in three lines: 'MIDEM' in orange, 'MEETING' in white, and 'JUNE 9' in orange.

## HOW IT WORKS / APPROACH

### EXPLORING USE CASES

1. CATALOGING, ATTRIBUTION AND DISTRIBUTION OF LIVE DJ MIXES

2. COMMERCIAL HIPHOP MIXTAPES BUILT FROM ORIGINAL MATERIAL AND BACK CATALOG

3. MUSICIANS COMPENSATED FOR VISUAL WORKS WHICH USE THEIR SONGS AS DATA

4. INDIVIDUAL ATTRIBUTION FOR SINGLE TRACKS IN NEW DERIVATIVE WORKS

#### ARTISTS

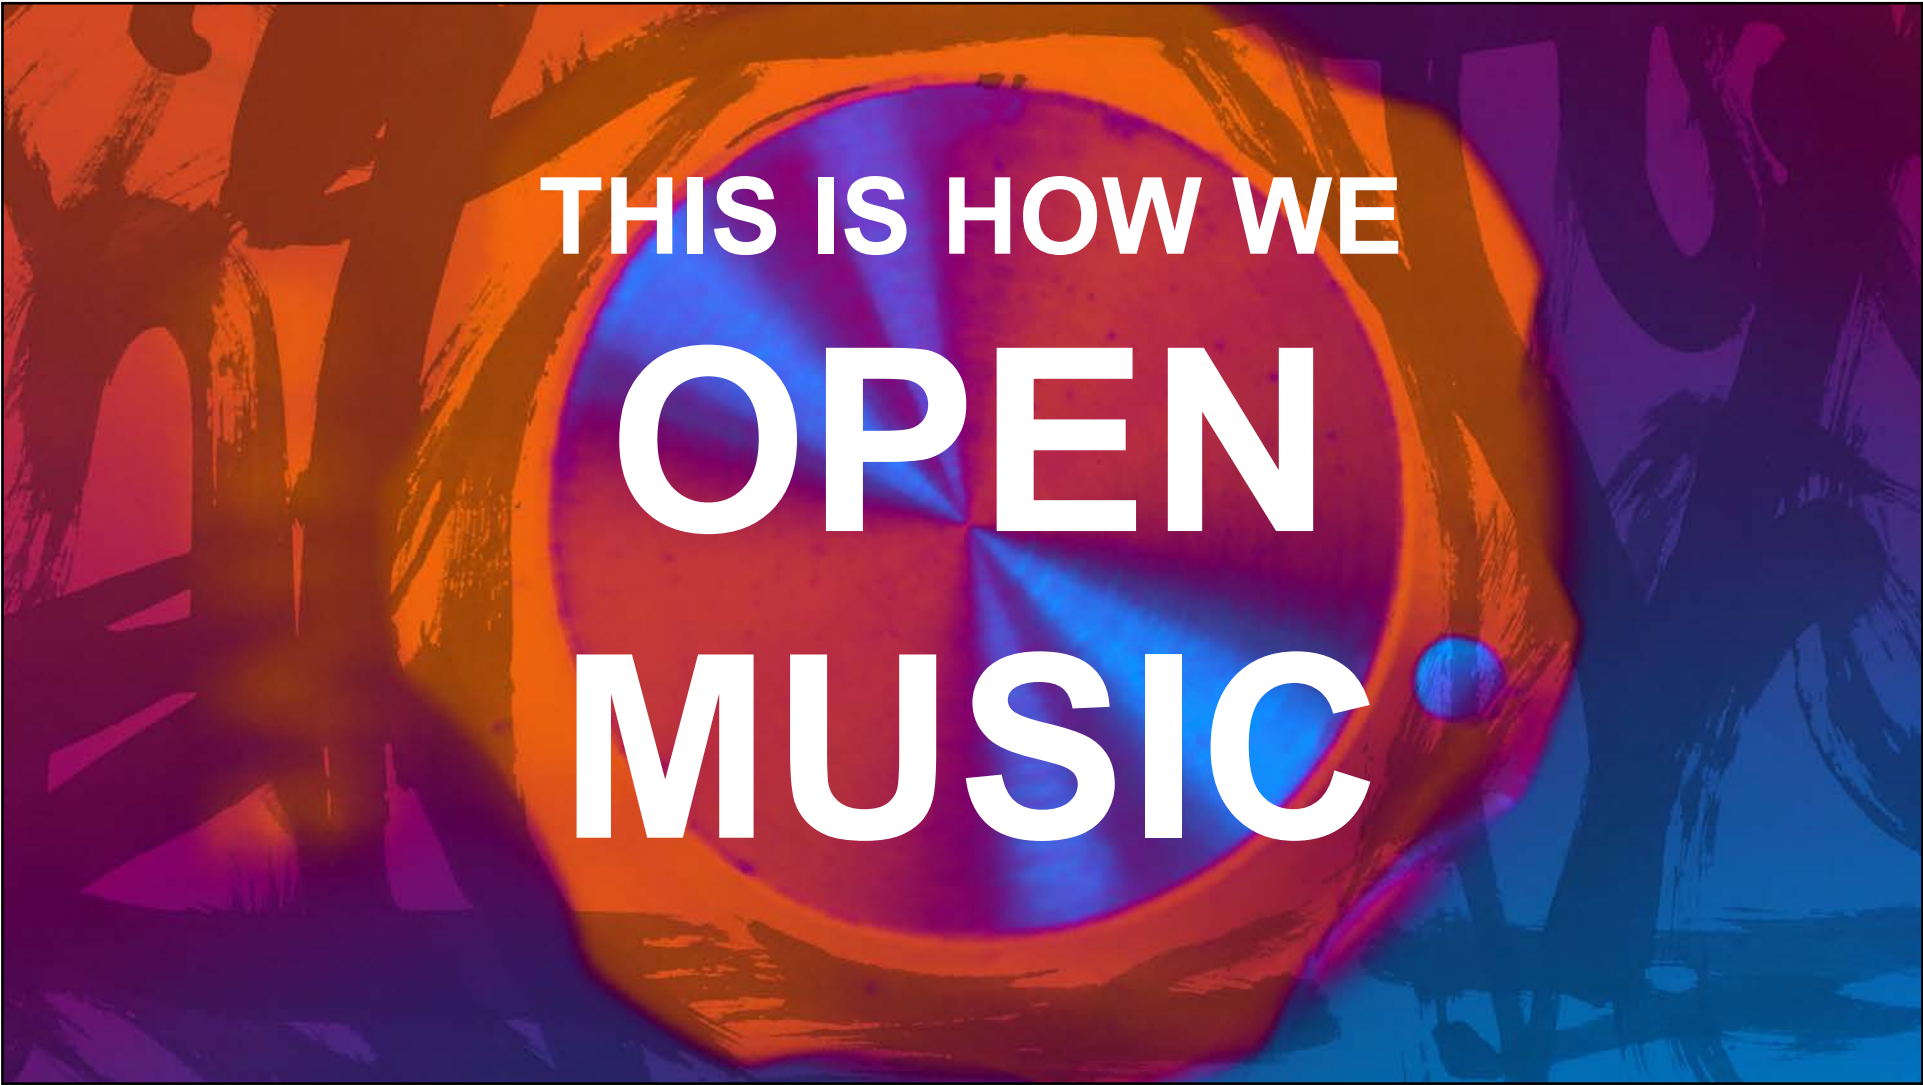

A SMALL, CURATED GROUP OF ARTISTS WILL MAKE NEW WORKS AND EXPLORE MEDIUMS DURING THE LAB. THEIR MASHUPS REQUIRE A NEW WAY TO CAPTURE INFORMATION ABOUT THEIR ART.

#### PRODUCT TEAMS

DEVELOPERS WILL BUILD PRODUCTS TO CAPTURE THIS INFORMATION INTO INTEL'S SAWTOOTH LAKE. THE BUSINESS REQUIREMENTS OF THE OMI AND ITS INITIAL API RELEASE WILL BE USED TO QUERY THE DATA ON THE BLOCKCHAIN TO KNOW WHO CONTRIBUTED TO EACH WORK

#### CREATORS

ACCESSING THE STORED WORKS WILL TAKE ELEMENTS AND MAKE NEW WORKS TO FEED BACK INTO THE BLOCKCHAIN

The background features a central, glowing orb with a color gradient from blue at the top to red at the bottom. The orb is surrounded by dark, abstract brushstrokes in shades of orange, red, and purple. Silhouettes of musical instruments, including a saxophone and a trumpet, are visible in the background, rendered in a dark, almost black color. The overall aesthetic is vibrant and artistic.

**THIS IS HOW WE  
OPEN  
MUSIC**

Berklee Trustee Update- 12 May 2017

**SPRINT 1**

**What new workflows might we design to gather critical information as music is being created?**

**SPRINT 2**

**What emergent fan experiences might result from data collection?**

What creator and fan incentives might we create to encourage sharing of this information?

# 12 CONCEPTS

OnRecord's 1/4" Plug creates a Soundprint that seamlessly embeds track-level performer identity

How might we anticipate the proliferation of atomized contributor data embedded in the tracks themselves?

**ARTISTS  
CAPTURE**

SOUNDPRINT TRACKS  
UPLOAD COMPLETE INFO

**FANS  
DISCOVER**

IDENTIFY FAVORITE RIFFS  
DISCOVER SIMILAR ARTISTS

**Aura** lets fans assign 10 artistic muses, then live-mixes available stems so music changes with the listener's movement and surroundings.

**How might we build systems that identify track-level contributions in new derivative works created from AI?**

# INTRSTLR

Connect with the stars you don't know.

**INTRSTLR** is a platform that analyzes song metadata to help fans discover lesser known artists, and then build a following around them.

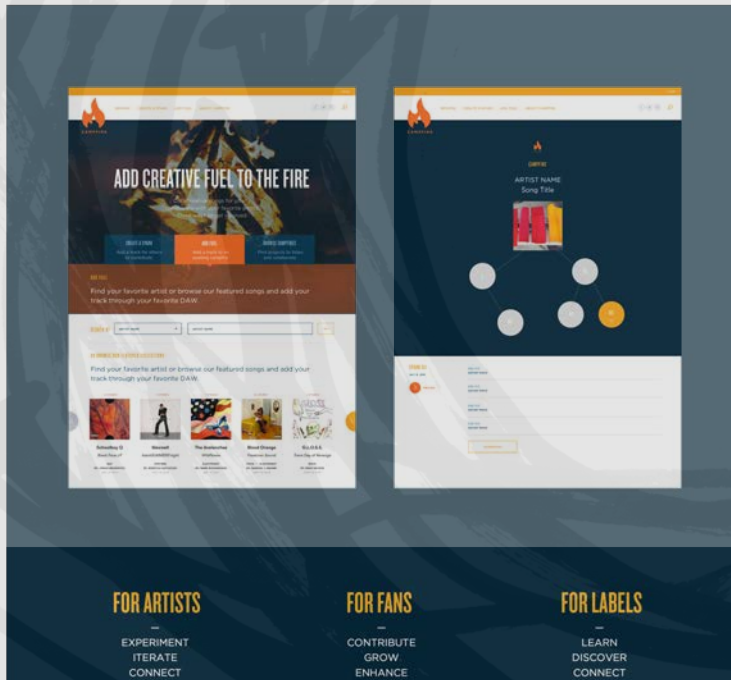

**How might we make song metadata easily accessible to help fans discover and support lesser known artists, producers and songwriters?**

CAMPFIRE

## ADD CREATIVE FUEL TO THE FIRE

- 1 Create a spark or add fuel.
- 2 Search by Artist or Trending.
- 3 Select your Campfire Node.
- 4 Download project file with your preferred DAW.
- 5 Upload your finished project.

**Campfire** is a platform that encourages derivative works—bringing all of this content into one, generative, trackable platform. Upload a track to see all the iterations people make, or hop in to add your own spin.

**How might we create a system that accommodates individual consumer identities so that we can realize revenue from derivative works?**
